# PROTECTING

## VALUABLE SCREWS AND CYLINDERS

INTRODUCING the **MAGNETIC CATCH** to protect the screws and cylinders in injection molding machines from small shards of steel.

Sharp fragments of steel can come from various places such as the blade of your grinding machine ; accidentally from the machine operator ; or from pelletized materials.

By installing the **MAGNETIC CATCH** between the material conveying horse and the material hopper on your injection molding machine, not only will you protect the machine's screws and cylinders, but also eliminate the NG of your plastic-molded products.

## SPECIFICATION AND FEATURES

### STRONG AND HEAT-RESISTANT

- I **Magnetic stick 9,000 Gauss**  
The standard magnet uses in hopper is only 2,500 gauss.
- II **Easy to clean**  
Just remove the magnetic stick and wipe clean.  
There is no need to empty the material in the hopper.
- III **Easy to maintain**  
The operator can easily check the magnetic stick at regular intervals.
